

# Introducing An Obscure Trading Strategy That Can Skim Thousands Every Month From The Currency Markets!

## Is It REALLY Possible?

I'm going to start with a question a lot of individual investors ask me these days. Is it truly possible to make money trading currencies in the Forex markets?

Oh sure, big powerful investment firms, hedge funds and institutions make billions with it. But what about you, the individual investor?

When I started trading Forex, I was like everyone else. Place a trade here, or there... make some money, lose some money.

I'd read blog posts and articles on all of the Forex websites. I would hit the message boards to see what the hot trade of the day was. I even checked out Forex books from the library. But it was always hit or miss.

After enough guesswork, I decided to do some *serious* homework and heavy-duty analysis.

And after a lot of trial and error, I actually started having some success. Now, I'm not going to sit here and tell you I made \$50 million dollars in 2 weeks. That would be ridiculous (and untrue).

But I can tell you I started actually making money on a consistent basis.

Over time, I refined my strategy to allow me to not only make regular profits in the currency markets, but also do it while keeping my risk down.

So to answer the question asked earlier, "YES" it is possible to generate regular, consistent profits trading Forex.

The problem is, most individual investors don't have the time, money, expertise or stomach to do what I did.

So that led me to a choice I had to make...

---

## Keep This To Myself Or Share It With Others?

And here it is.

On one hand, *I knew I could use my strategy to skim hundreds or even thousands from the currency markets every month.*

Like I said earlier, it's not a system designed to make someone rich overnight. I'll be honest and tell you I can't use this system to turn \$500 into \$14 million in 30 days.

On the other hand, I knew in addition to generating some extra income for myself with this strategy, *I could make even MORE money by figuring out a way to teach others to do the same thing.*

It turned out the decision was an easy one to make...

You see, by pure chance I met the CEO of **Hyperion Financial Group**.

After talking a bit, I realized his company provided investment research and strategies to over 250,000 subscribers around the world.

I then realized that if I could teach my strategy to their customers, I could do a good thing by helping these people out *and* make a lot of money in the process....

...but only if my strategy worked!

Hyperion's CEO told me that their revenues are 100% subscription-based. Meaning they *only* make money if people buy their strategies... use them... and renew their subscriptions because they're actually making money!

So if Hyperion's editors and analysts do a good job, they make money. If they don't, they don't.

It made sense to me... but there was just one problem.

---

## **My Strategy Was Originally Designed ONLY For Professional, Full-Time Traders!**

So in order to get this going with Hyperion, I knew I had to figure out a way to make my strategy work for the individual investor.

For someone who:

- Didn't have all day to sit in front of a computer
- Didn't have a huge bankroll to get started with
- Didn't have the 'technical' knowledge to read complicated charts
- Didn't have the emotional training to stomach the severe ups and downs of professional trading
- Didn't want to take on ridiculous risk

So I set out on a journey to develop a Forex trading system that could help individual investors trade currencies successfully.

Over the next few pages I'm going to take you on this journey.

*Along the way, you're going to discover exactly what you need to know to begin making money in Forex.*

How far you want to take it is completely up to you. I really believe you can start making several hundred to several thousand dollars a month in Forex.

For those who want more, you can take these same principles and increase your position size. It's really up to you.

So hopefully you now have a better sense of why you're reading this: **You want to make money trading currencies, plain and simple.**

And I'm going to show you how...

---

## How Everyday Investors Can Harness Professional Forex Secrets

When I began tinkering around with my trading strategy, trying to adapt it so just about anyone could use it, something remarkable happened...

You see, I spent months and endless hours researching my new Forex trading system...

I spent literally day after day pouring over my successful trades. I wanted to know why these trades made money. I spent twice as much time studying my losses. I needed to know why these trades didn't work. I needed to pull out the key data...

When I started analyzing the data, I noticed patterns, trends, and signs that could improve my results. And then it happened...

**The new results were working BETTER than my professional system!**

After some serious analysis, I finally figured out why. Instead of just relying on technical indicators like 99% of all the Forex systems out there, I added fundamental indicators to the mix.

All that means is this, if you can confirm a technical indicator that you're using with supportive *fundamental* data, you have a MUCH higher chance of success with your trading.

And just to provide you with a quick definition- technical indicators are found exclusively in the charts of whatever currency you're analyzing. Fundamental indicators are those found outside the charts. It can be a GDP number, a central bank announcement, a war, riot, etc.

To successfully trade currencies, you have to pay attention to both!

I think the best way to explain what I'm talking about is to show you some actual trades... and show you how you can use this approach in your own trading.

Let's go...

---

## How I Nearly Nearly Doubled My Money In Two Days

I had been trading in and out of the EUR/USD Forex pair with good success.

As a technical indicator, the trend line is often an indicator of direction, and one I use regularly.

When a currency pulls back into a trend line it has a high probability of resuming a higher move. Why? Because trend lines often confirm key fundamental data. As we say, the trend is your friend.

In mid-March the Euro was bouncing up the trend line. And the ECB started talking tough about inflation. It looked likely they'd be raising interest rates at the next meeting.

The anticipation of a rise in interest rates was pushing the Euro higher and higher.

Once we had a pullback, I knew it was time to strike...

After verifying the fundamental data, the trend line gave me a perfect entry point.

Take a look at the chart below...

I entered the trade at \$1.387, and exited at \$1.4137. A 250 point gain!

The currency accelerated faster than I anticipated, and hit my profit target very quickly. **I walked away with a 90% gain on this trade... in just two days!**

Here's the key indicator I used that you can use RIGHT NOW to make some money...

It's a simple trend line.

Using just about any charting software or program, you can identify simple trend lines.

**Once a trend starts, it will usually continue for a while... days, weeks, even months.**

That's all fine and great, but if you really want to find an explosive trade, combine using trend lines with some piece of fundamental data (like one of the central banks talking about interest rates).

**When fundamental data supports your trend line (or whatever technical indicator you're using), you have the potential for an explosive winner on your hands.**

This Euro trade is a perfect example of having a really great chart formation, and then using fundamental data for confirmation.

Now, not all trades require using both technical and fundamental data. Sometimes, you can switch away from the technicals altogether.

Let me give you an example trading just on fundamentals...

### **A Perfect Example of How Fundamental Analysis Can Make You A Lot Of Money**

After the massive earthquake and tsunami struck Japan, the JPY/USD pair was falling dramatically. Citizens were bringing currency back home preparing for the rebuild.

And it had gotten to the point where the JPY/USD pair was falling so fast it could seriously crush a big part of the Japanese economy.

Now, I knew the Bank of Japan would step in and try to support the Yen.

So I established a trade at ¥81.48, simply ignoring the technicals, which were calling for a continued drop. We did see a bit of a pull back from my entry point...

But about 24 hours later the G-7 stepped in and intervened, supporting the Yen across the board. This caused a dramatic spike in the USD/JPY pair.

I knew the huge quantities of currency the central banks would be moving wouldn't vanish overnight... so this trade had time to develop.

**13 days later, my limit order triggered, capturing a profit of 92.1%**

**In your own trading be sure to look for situations where you can ignore the technicals altogether.** It takes a little bit of thought, but the rewards are well worth it!

News and other market moving events, like earthquakes, can really drive a currency into overbought or oversold levels. Just be sure to give yourself a little leeway in your sell triggers.

---

I've just shown you how fundamental factors can be used by themselves or with technical analysis to make money in Forex.

And while I believe this fundamntal data is what really sets my strategy apart from most others, I still use technical analysis by itself occassionally.

Every once in awhile, I'll find a technical set-up so enticing, I'll just enter the trade without any further fundamental confirmation.

Here's an example...

### **A Great Technical Set-Up In The Aussie Dollar**

As you probably know, the commodities market has been on a bull run for quite some time. As a result, the currencies of countries producing commodities for export have been appreciating steadily...

You see, strong commodity sales drive unemployment down and economic activity up. The result is a positive impact on the currency. And in the land down under, the commodities industry is skyrocketing.

A little while ago it didn't take a genius to notice the Aussie Dollar trend was up. But finding an entry point proved difficult.

Then I got my signal...

The MACD indicator crossed over and moved to the upside. A MACD can indicate when a trend is changing, and the speed at which the change is occurring.

Take a look at the chart below (the MACD indicator is at the bottom)...

---

I entered the trade at \$1.0211. The uptrend continued and the MACD got me in at just the right time. I ended up setting my limit at **\$1.0372 and was taken out of the trade for a 78.6% profit...**

**I don't have the room to fully explain the MACD indicator here but in a nutshell what it does is monitor different moving averages of a currency you're monitoring.**

If it crosses over, this can often signal a terrific time to take a position. It's one indicator I have had a lot of success with in my currency trading, and one I make ample use of in my new strategy!

## **So Why Does My New Strategy Work So Darn Well?**

I hinted at this earlier but now I want to drive it home...

Most Forex strategies use either purely technical indicators or straight fundamentals to trade.

Those types of systems ignore a key set of data which often influences the currency!

---

You can have a lot more success and make a lot more money if you can find a way to incorporate both technical and fundamental analysis into your currency trading.

This idea has been used successfully in stock trading for years.

It's time investors realized that the same concept can work in Forex trading.

For awhile now I've tinkered and perfected this concept as part of my new strategy.

I balance both the *technical indicators you've seen* before with real-time fundamental data points that impact currency prices.

I call this principle the "Forex Switch".

And it's the key to the success of my new trading strategy...

## **How You Can Use the "Forex Switch" To *Finally* Start Making Real Money**

The last thing I ever wanted to be was one of *"those guys"*. You know, the guy hawking some bullet-proof system guaranteeing to turn you into a billionaire overnight.

Or get rid of your debt without paying anyone anything.

As an alternative, I decided I would tell people exactly what to do to start making regular money in Forex.

Now, before launching this thing to the public, I decided that it had to offer subscribers a few important components.

**First, it had to be easy to use.** I decided I would email out my trades as soon as I found them. I'd tell people exactly which currency to buy and how much to pay. I'd also tell them what technical and fundamental data were supporting the trade!

**Second, I wanted to make sure people knew exactly when to sell.** Because unloading an investment is the most difficult part of investing, I decided to give people

---

---

the automatic stops they need on each position to lock in profits and cut losses short (this is really easy to do).

**Third, I wanted to make sure my subscribers were up-to-date on all open trades.** So I decided I'd send everyone an update every single week of the year. This way, they'd never be left in the dark about any of our positions!

And finally, I decided I had to put all this together in one convenient package that includes trade alerts, continuous monitoring, website access, and a host of background reports that explain the strategy, tell you how to open an account, and just about anything else you'd ever want or need to know about currency trading!

The end result is my new trading service called *The Forex Blueprint*.

## **When Can I Get My Hands On This And Trade My Own Account With It?**

We'll be launching *The Forex Blueprint* sometime in mid-May.

Now, being the one who developed this system literally from the ground up, I can tell you it's one of the most effective Forex systems I've ever seen.

Especially for those who like to take nice profits, over and over again, in a fairly short amount of time.

But, if you're looking to take \$500 and turn it into \$14 million in 4 weeks, then this definitely isn't for you.

*The Forex Blueprint* is about finding high-probability, low-risk, short-term trades and magnifying those trades with leverage in the currency market. **It's a realistic strategy based on solid research and a sound trading plan.**

If that's something you're interested in, keep a careful eye on your inbox over the next few days...

We'll rush you the details as soon as we get'em!

Karl
